

Exercise for Install Multisite

1. Open '**httpd-vhosts.conf**' file from 'C:\xampp\apache\conf\extra' and add these lines.

- a.

```
<VirtualHost *:80>
ServerAdmin test@localhost.drupal1
DocumentRoot "C:/xampp/htdocs/drupal-7.34"
ServerName localhost.drupal1
ServerAlias www. localhost.drupal1
ErrorLog "logs/ localhost.drupal1-error.log"
CustomLog "logs/ localhost.drupal1-access.log" combined
</VirtualHost>
```

- b.

```
<VirtualHost *:80>
ServerAdmin test@ localhost.drupal2
DocumentRoot "C:/xampp/htdocs/drupal-7.34"
ServerName localhost.drupal2
ServerAlias www. localhost.drupal2
ErrorLog "logs/ localhost.drupal2-error.log"
CustomLog "logs/ localhost.drupal2-access.log" combined
</VirtualHost>
```

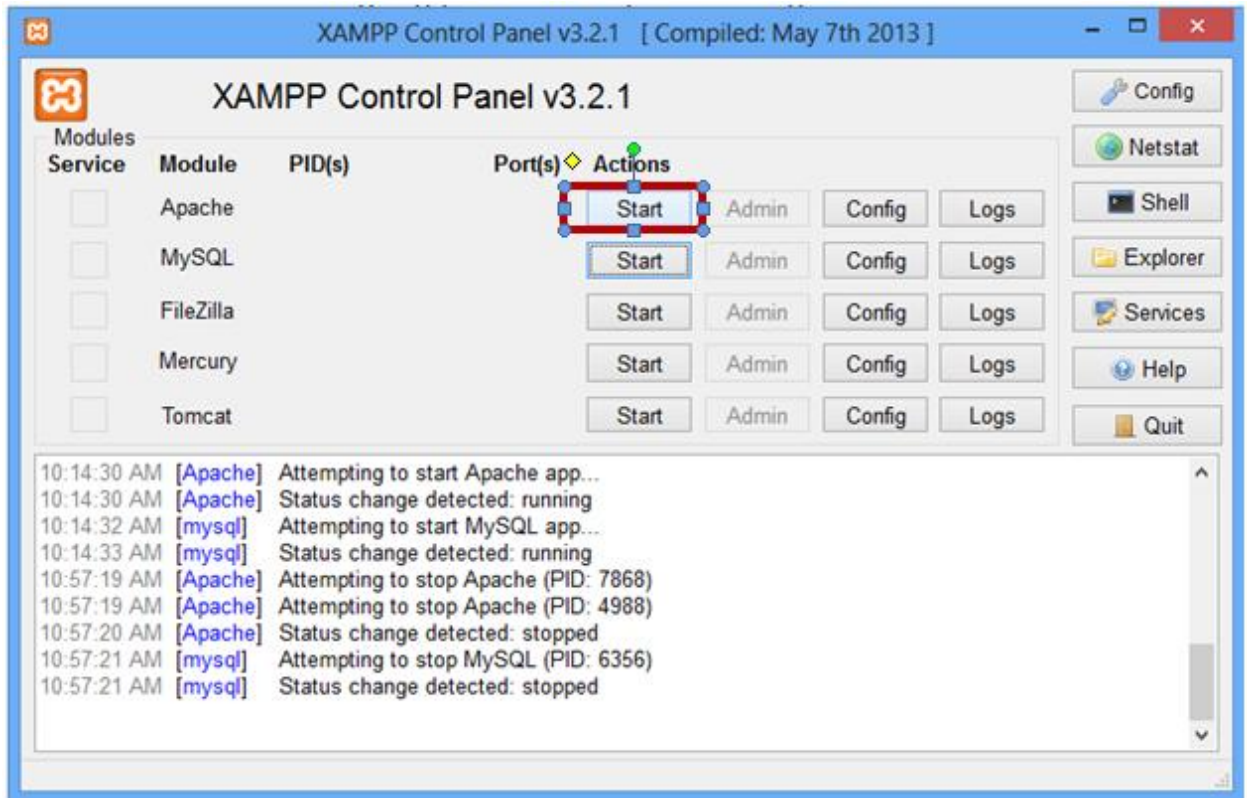

2. Now open "**host**" file '%windir%\system32\drivers\etc\' directory(directly file not allow to edit and save) so,

- a. Copy this file to your desktop.
- b. Now edit file and add this 4 line and save.

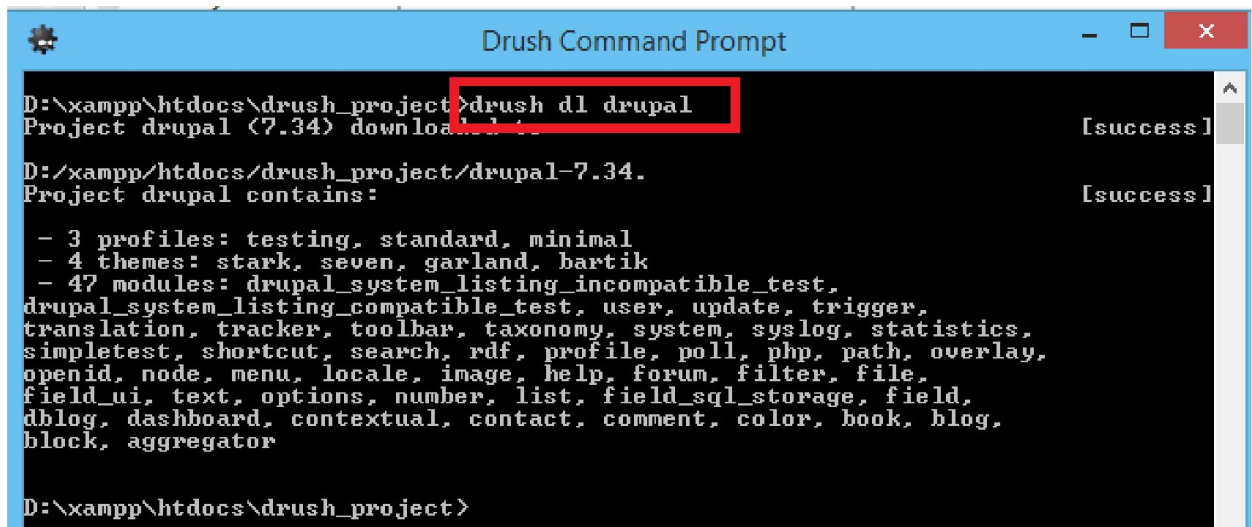

```
127.0.0.1 localhost.drupal1
127.0.0.1 localhost.drupal2
127.0.0.1 www.localhost.drupal1
127.0.0.1 www.localhost.drupal2
```

- c. Replace saved file with "**host**" file in '%windir%\system32\drivers\etc\' directory.

3. Restart your web server.

4. Now Download latest stable drupal:**drush dl drupal**

5. Check drupal status

a. First Go To drupal directory using command **cd drupal-7.34**

b. drush status

```
D:\xampp\htdocs\drush_project>ls
drupal-7.34

D:\xampp\htdocs\drush_project>cd drupal-7.34

D:\xampp\htdocs\drush_project\drupal-7.34>drush status
Drupal version      : 7.34
Default theme       : garland
Administration theme : garland
PHP executable       : php.exe
PHP configuration    : "C:\Program Files (x86)\Drush\Php\php.ini"
PHP OS              : WINNT
Drush version        : 6.0
Drush configuration  :
Drush alias files    :
Drupal root          : D:/xampp/htdocs/drush_project/drupal-7.34

D:\xampp\htdocs\drush_project\drupal-7.34>
```

6. . Create 2 folder name

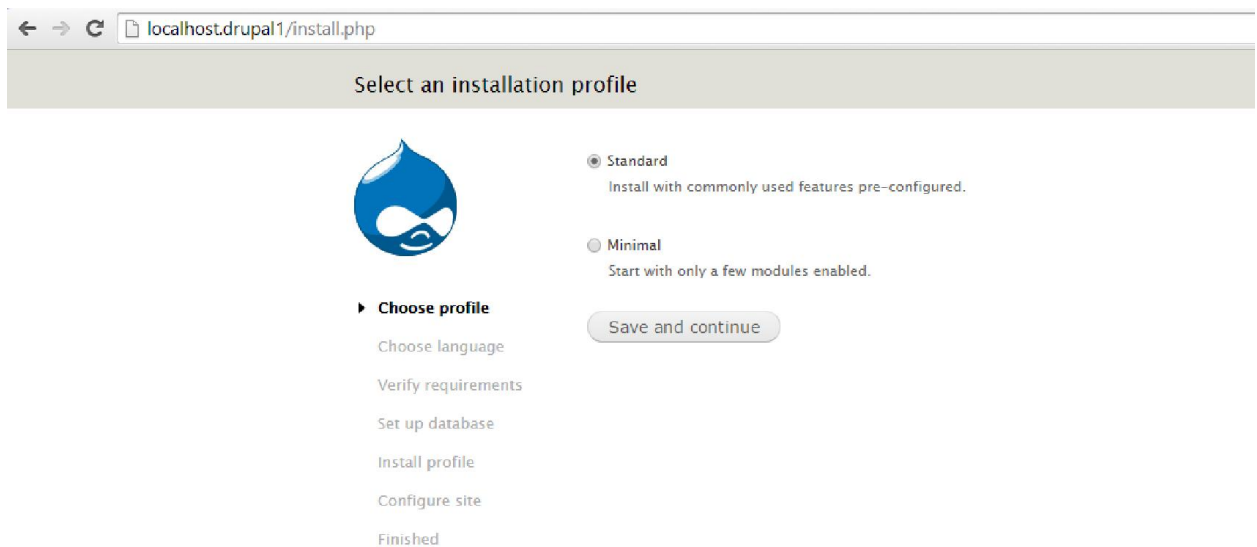

a.) **localhost.drupal1**

and

b.) **localhost.drupal2**

inside of 'C:\xampp\htdocs\drupal\sites\'

7. Install them as standard drupal installation process.

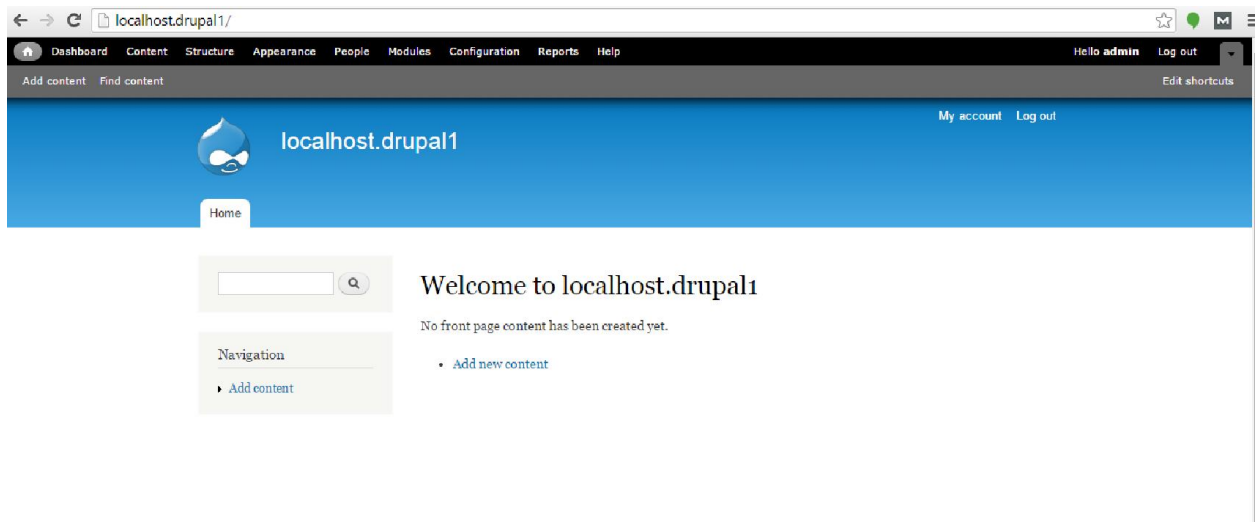

a. Select standard installation and click save and continue button.

b. Choose Language.

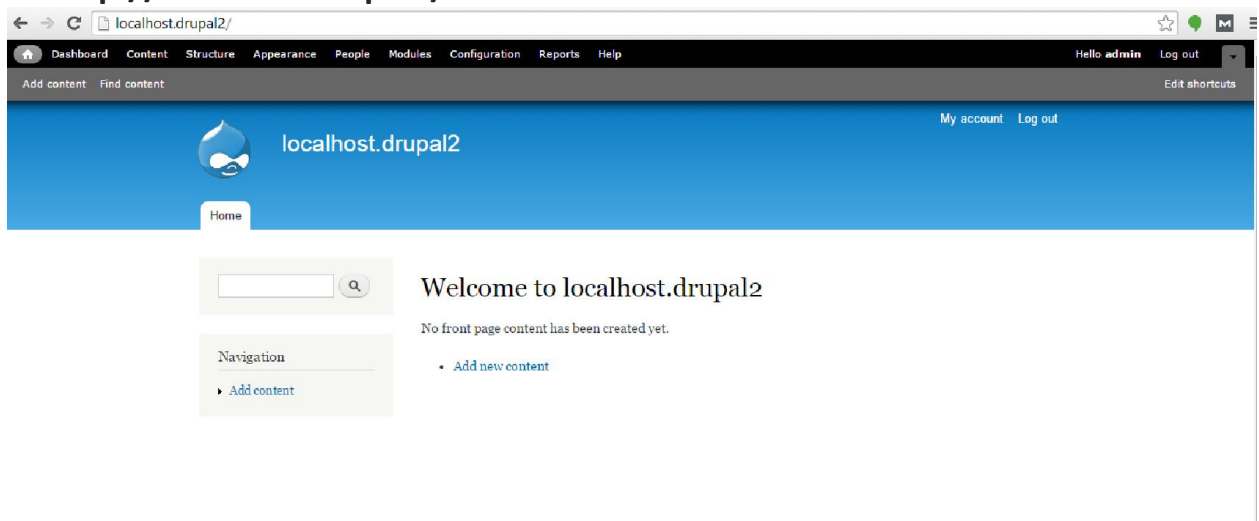

c. Setup database:- database name(**drupal1**),db username(default is **root**),password(not compulsory).

d. Wait for to complete installation.

- e. Configure site by providing your email address, username, password and etc.
8. Now Drupal "multisite installation" is done for first site(**drupal1**) , you should look at
a.) <http://localhost.drupal1/>

9. For further installation(**drupal2**). follow above steps for second installation
<http://localhost.drupal2/>

10. Now Drupal "multisite installation" is done.
